## Mathematics Arts State Standards

## Grade 6

## Standards for Mathematical Practice - "HOW" My student can:

$\square$ make sense of problems, persevere in solving them, and check the reasonableness of answers.
$\square$ reason with and flexibly use math symbols, numbers, and operations.
$\square$ construct mathematical arguments (using stated assumptions, definitions, previously established results, and logical
$\square$ progressions) and critique the math reasoning of others.
$\square$ recognize math in everyday life and use math to solve real problems.
$\square$ use tools (e.g., protractor, calculator) strategically to solve problems and deepen understanding.
$\square$ calculate accurately, use precise math definitions and vocabulary, and express math ideas clearly.
$\square$ look for and make use of patterns and structure in math.
$\square$ discern when calculations are repeated and look both for general methods and for shortcuts.

## Math Content Standards - "WHAT" Ratios and Proportional Relationships My student can:

$\square$ understand ratios and use ratio language to describe the relationship between two amounts. 6.RP. 1
$\square$ understand how to find a rate when given a specific ratio. For example, "We paid $\$ 75$ for 15 hamburgers, which is a rate
$\square$ of $\$ 5$ per hamburger. 6.RP. 2
solve real-world and mathematical word problems related to ratios and rates.
6.RP. 3
$\square$ make tables of equivalent ratios, find missing values in the tables, plot those values on a coordinate plane, and use the
$\square$ tables to compare ratios. 6.RP.3a
$\square$ solve unit rate problems including unit pricing \& constant speed (e.g., If it took 7 hours to mow 4 lawns, then at that
$\square$ rate, how many lawns could be mowed in 35 hours? At what rate were lawns being mowed?). 6.RP.3b
$\square$ find a percent of a quantity as a rate per 100 (e.g., $30 \%$ of a quantity means 30/100 times the quantity). 6.RP.3c
$\square$ solve problems to find the whole, given a part and the percent. 6.RP.3c
$\square$ use what is known about ratios to convert/manipulate units of measurement when multiplying \& dividing. 6.RP.3d

## The Number System

## My student can:

divide two fractions; solve word problems involving the division of fractions by fractions. 6.NS. 1
$\square$ quickly and easily divide multi-digit numbers. 6.NS. 2
fluently add, subtract, multiply and divide multi-digit numbers involving decimals. 6.NS. 3
$\square$ find the greatest common factor of two whole numbers less than or equal to 100. 6.NS. 4
$\square$ find the least common multiple of two whole numbers less than or equal to 12 . 6.NS. 4
$\square$ use the distributive property to show the sum of two whole numbers 1-100 with a common factor as a multiple of a
$\square$ sum. For example, show $36+8$ as 4 (9+2). 6.NS. 4
$\square$ understand that positive \& negative numbers are used to describe amounts having opposite values or directions. 6.NS. 5
$\square$ use positive and negative numbers to represent amounts in real-world situations; explain the meaning of 0 in each
$\square$ situation. 6.NS. 5
$\square$ understand that a rational number is a point on a number line. 6.NS.6
$\square$ extend number line diagrams and axes to show positive and negative numbers on the line and in the plane. 6.NS.6
$\square$ recognize opposite signs of numbers as showing points on opposite sides of 0 on the number line. 6.NS.6a
$\square$ understand signs of numbers in ordered pairs as showing locations in quadrants of the coordinate plane; recognize that
$\square$ when two ordered pairs differ only by signs, the points are related by reflections across one or both axes. 6.NS.6b
$\square$ place integers and other rational numbers on a horizontal or vertical number line diagram. 6.NS.6C
$\square$ place ordered pairs of integers on a coordinate plane. 6.NS.6c
$\square$ order positive and negative numbers; understand absolute value of rational numbers. 6.NS. 7
$\square$ interpret statements of inequality as statements about the relative position of two numbers (positive or negative) on a
$\square$ number line (e.g., interpret $-3>-7$ to mean that -3 is located to the right of -7 on a horizontal number line). 6.NS.7a
$\square$ write and explain statements that show the order of rational numbers in realworld situations (e.g., write $-3^{\circ} \mathrm{C}>-7^{\circ} \mathrm{C}$ to
$\square$ show that $-3^{\circ} \mathrm{C}$ is warmer than $-7^{\circ} \mathrm{C}$ ). 6.NS. 7 b
$\square$ understand the absolute value of a rational number as the number's distance from 0 on the number line. 6.NS.7c
$\square$ understand absolute values as they apply to real-world situations (e.g., for an account balance of -30 dollars, write
$\square|-30|=30$ to describe the size of the debt in dollars). 6.NC.7c
$\square$ tell the difference between comparing absolute values and ordering positive and negative numbers. 6.NS.7d
$\square$ graph in all four quadrants of the coordinate plane to help solve real-world and mathematical problems. 6.NS.8
$\square$ find the distance between points with the same first coordinate or the same second coordinate. 6.NS.8

## Expressions and Fractions

## My student can:

$\square$ write and understand numerical expressions involving whole-number exponents. 6.EE. 1
$\square$ write, read and evaluate expressions in which letters stand for numbers (e.g., express "subtract y from 5" as 5-y). 6.EE. 2
$\square$ identify the parts of an expression using mathematical words (sum, term, product, factor, quotient, coefficient). 6.EE.2b
$\square$ view one or more parts of an expression as a single unit (e.g., describe 2(8+7) as a product of two factors; view ( $8+7$ )
$\square$ as a sum of two terms or as the single quantity 15). 6.EE.2b
$\square$ determine the answer to expressions when given the specific value of a variable. 6.EE.2c
$\square$ use "order of operations" to solve problems in the conventional order when there are no parentheses. 6.EE.2c
$\square$ use properties of operations to create equivalent expressions (e.g., apply properties to $y+y+y$ to produce $3 y$ ). 6.EE. 3
$\square$ identify when two expressions are equivalent (e.g., when two expressions name the same number regardless of the
$\square$ value substituted for the letter: $y+y+y=3 y$ or $3(2+x)=6+3 x)$. 6.EE. 4
$\square$ understand that solving an equation or inequality is like answering a question: which values makes the equation or
$\square$ inequality true? Use substitution to determine whether a given number makes an equation or inequality true. 6.EE. 5
$\square$ use variables to represent numbers and write expressions when solving realworld problems. 6.EE. 6
$\square$ understand that a variable can represent an unknown number or a number in a specified set. 6.EE. 6
$\square$ write and solve equations in the form $\mathrm{x}+\mathrm{p}=\mathrm{q}$ and $\mathrm{px}=\mathrm{q}$ when $\mathrm{p}, \mathrm{q}$, and x are all nonnegative rational numbers. 6.EE.7
$\square$ write an inequality in the form $x>c$ or $x<c$; represent the infinite solutions of these inequalities on a number line. 6.EE.8
$\square$ write an equation to express one quantity, the dependent variable, in terms of the other quantity, the independent
$\square$ variable (e.g., write $\mathrm{d}=65 \mathrm{t}$ to represent the relationship between distance and time). 6.EE. 9
$\square$ use graphs and tables to show the relationship between dependent and independent variables. 6.EE. 9

## Geometry

## My student can:

$\square$ put together and take apart shapes to find the area of right triangles, other triangles, special quadrilaterals, and
$\square$ polygons; apply these techniques to solve real-world and mathematical problems. 6.G. 1
$\square$ use unit cubes to find the volume of a right rectangular prism with fractional edge lengths; show that the volume is the
$\square$ same as found by multiplying the edge lengths of the prism. 6.G.2
$\square$ use the formulas $V=1 \mathrm{wh}$ or $V=\mathrm{b} h$ to find volumes of right rectangular prisms in real-world problems. 6.G.2
$\square$ draw polygons in the coordinate plane when given the coordinates for the vertices. 6.G. 3
$\square$ use coordinates to find the length of a polygon's side in a coordinate plane. 6.G. 3
$\square$ show how three-dimensional figures can be represented with two- dimensional nets (a net is the pattern made when the
$\square$ surface of a three-dimensional figure is laid out flat) made of rectangles and triangles. 6.G. 4
$\square$ figure out the surface area of 3-D shapes by using nets; apply this technique to real-world \& math problems. 6.G. 4

## Statistics and Probability

## My student can:

$\square$ understand that a statistical question expects responses/data to be varied (e.g., "How old are the students at the
$\square$ school?" is a statistical question because one anticipates variation in students' ages). 6.SP. 1
$\square$ understand that a set of statistical data has a distribution that can be described by its center, spread, \& shape. 6.SP. 2
$\square$ understand that a set of numerical data has a "measure of center" (median and/or mode) that summarizes all of its
$\square$ values with one number. 6.SP. 3
$\square$ understand that the measure of variation in a set of data describes with one number how values vary. 6.SP. 3
$\square$ show numerical data in plots on a number line, including dot plots, histograms, and boxplots. 6.SP. 4
$\square$ summarize numerical data sets by reporting the number of observations. 6.SP.5a
$\square$ summarize data by describing the attribute under investigation, including how it was measured. 6.SP.5b
$\square$ summarize data by giving numerical measures of center and variability as well as describing overall pattern. 6.SP.5c
$\square$ describe deviations from the overall pattern of a data set, referring to the context of data collection. 6.SP.5c
$\square$ describe the relationship between the measures of center \& variability and the shape of the data distribution. 6.SP.5.d
